

# Maintenance of Church & Hall Buildings

In addition to the obligations of Essential Safety Measures to Church and Hall buildings, best practice property maintenance is achieved with the support of an Asset Management Plan that includes a planned maintenance and cyclical repairs and replacement program.

#### A Commitment to Maintenance

Planned maintenance is a schedule of preventive checklists. Cyclical repair and replacement is the maintenance, updating or replacement of the building components, equipment, fixtures and fittings on a cycle to sustain the asset in good order.

Asset maintenance = safe use of property.

#### **Exterior of Buildings**

By ensuring the components of Church and Hall buildings are intact, this can prevent any damage from spreading to the interior. When completing a new building project the building contractor will provide a maintenance schedule. Maintenance must be attended to maintain warranty protections.

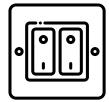

#### **Interior of Buildings**

An Asset Management Plan can assist in determining what parts of the building will require greater attention when preparing a cost plan for ongoing building maintenance, repairs, replacement and upgrades.

#### **Plumbing and Fixtures**

Water escape can cause serious damage to the interior and structure of Church and Hall buildings.
Repairing water damage is costly and avoidable by carrying out a consistent program of cyclic repairs and replacement.

#### **Electrical equipment**

Electrical faults are incredibly dangerous if left unattended or not repaired correctly. Regular professional servicing of all electrical equipment including switchboards improves safety for all property users.

#### Landscaping

Regular inspection of the perimeter of each building is necessary to remove all hazards. Maintain a sealed surface for all car spaces and pedestrian transitions to buildings whenever possible.

#### Safetv

A property maintenance checklist should be completed annually and approved by the Church Council for record of maintenance, refer to Appendix Y - Annual Property Maintenance Checklist available at https://victas.uca.org.au/recources/ohs.

A Building Condition Report is recommended to be carried out every 5 years by a registered Consulting Engineer or Building Consultant to determine the status of the overall building.
